

Third Generation PV and Other Ways to Utilize Solar Energy

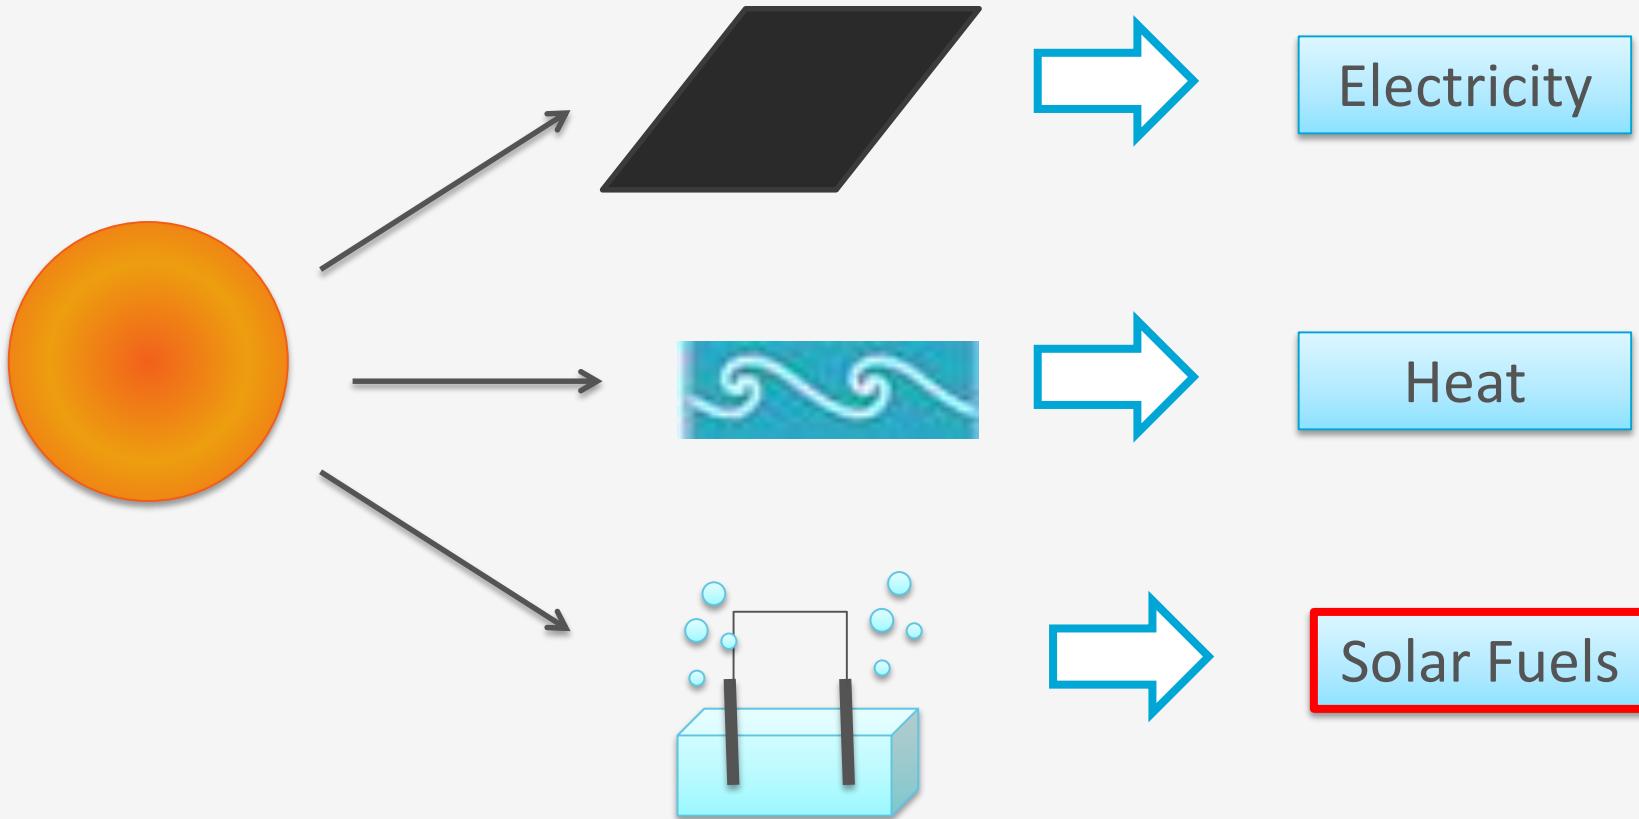

Solar Fuels

Week 6.3

Arno Smets, Wilson Smith, Paula Perez Rodriguez

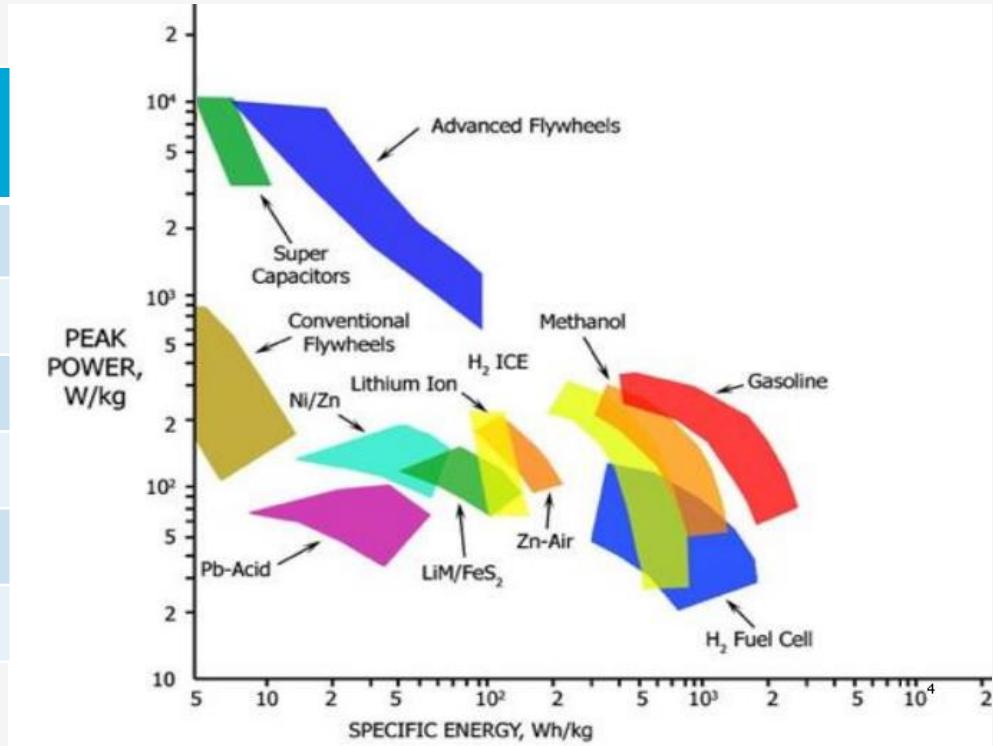

Challenge the future

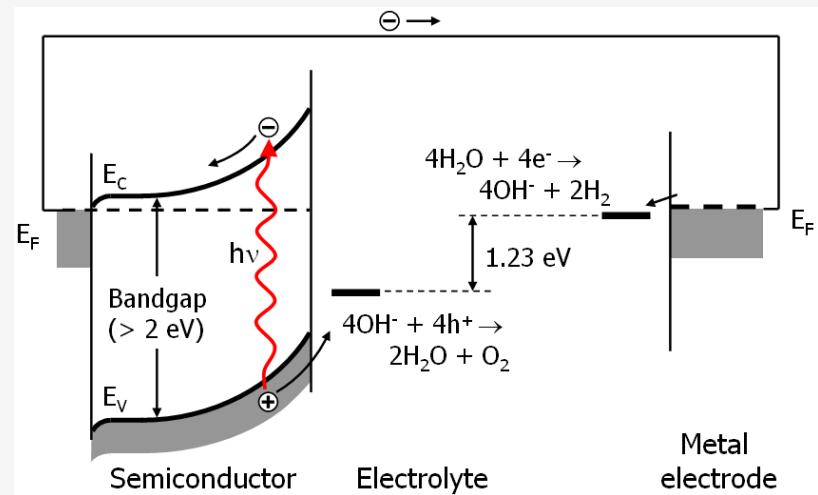

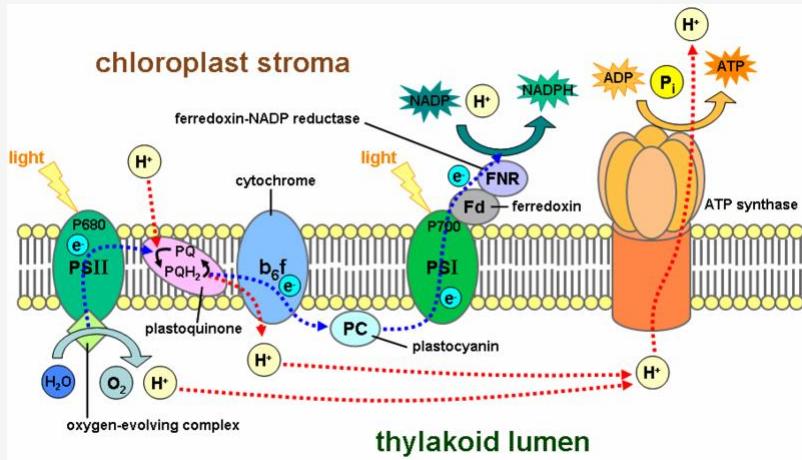

Ragone Plot: Energy vs Power Density

Fuel	Energy [kJ/g]	Energy [kJ/l]
Coal	29.3	-
Wood	14.6	-
Gasoline	43.5	30590
Diesel	42.7	29890
Natural Gas	50.02	31.7
Hydrogen	119.9	10

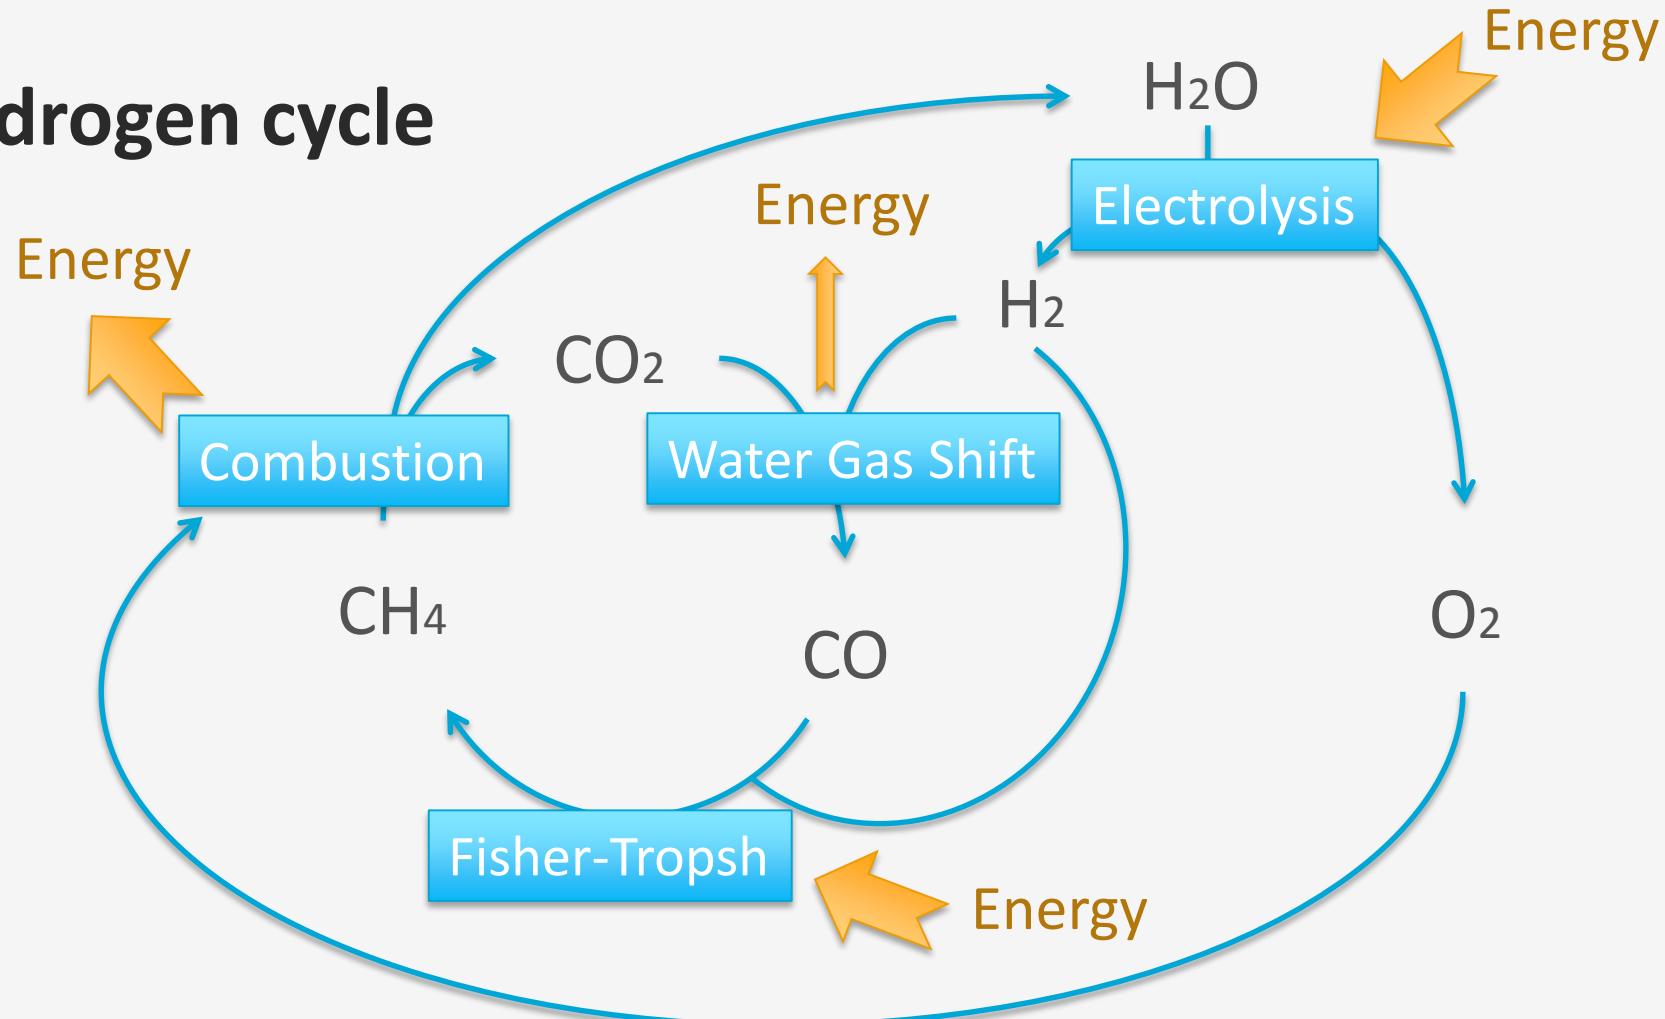

Source: "Indication of anomalous heat energy production in a reactor device containing loaded nickel powder". Levi et al. 2013

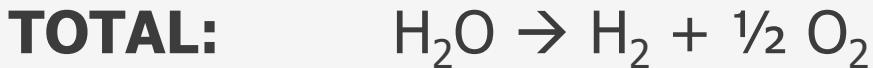

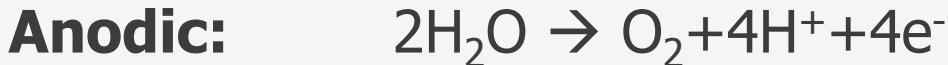

Can we learn from Nature?

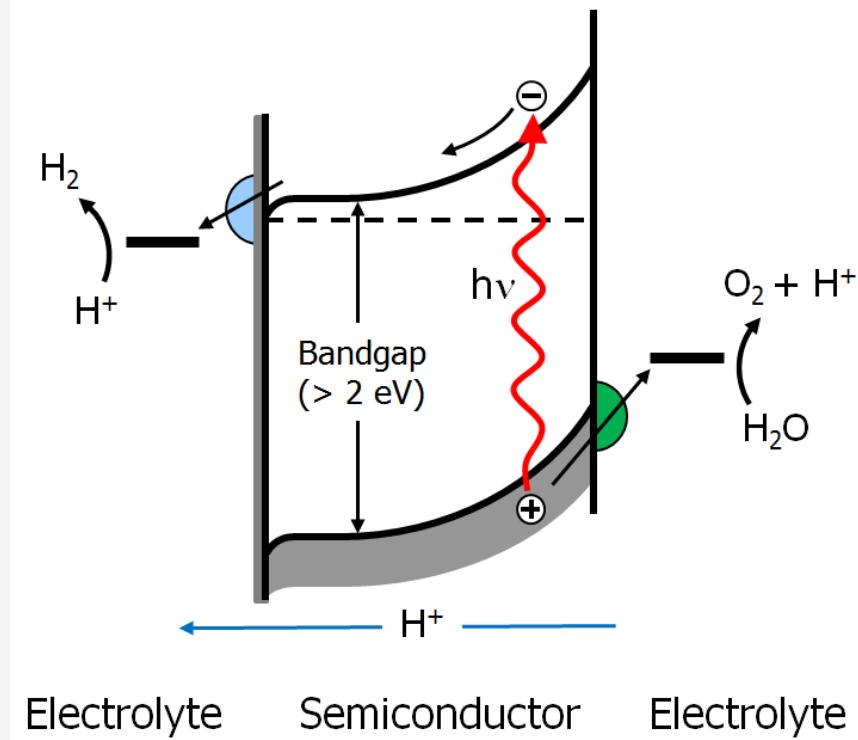

Hydrogen cycle

Direct photoelectrolysis

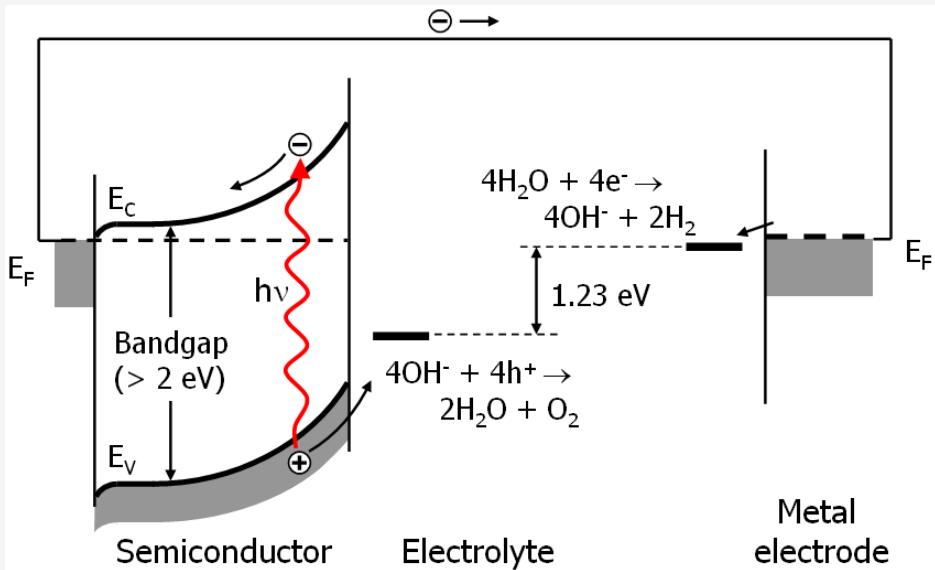

Potential: 1.23 V

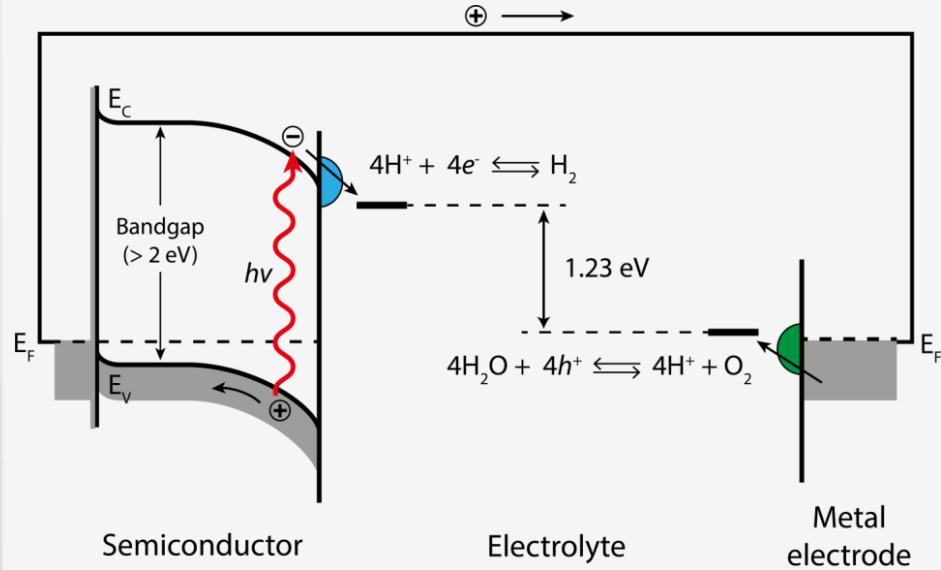

Band bending

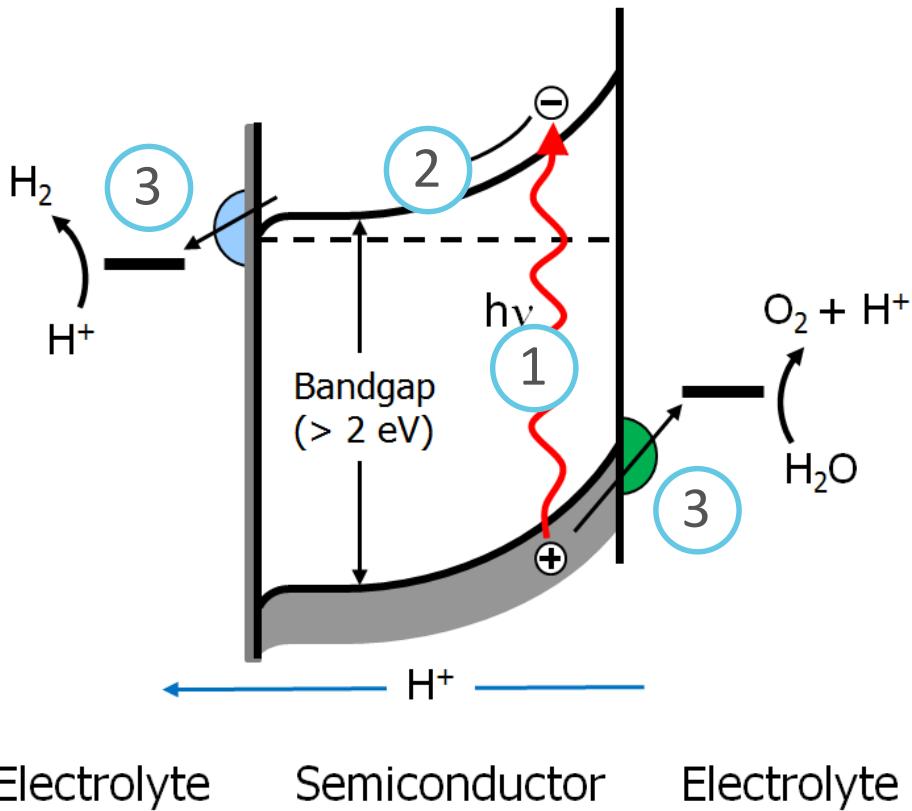

N-type semiconductor: Anode

P-type semiconductor: Cathode

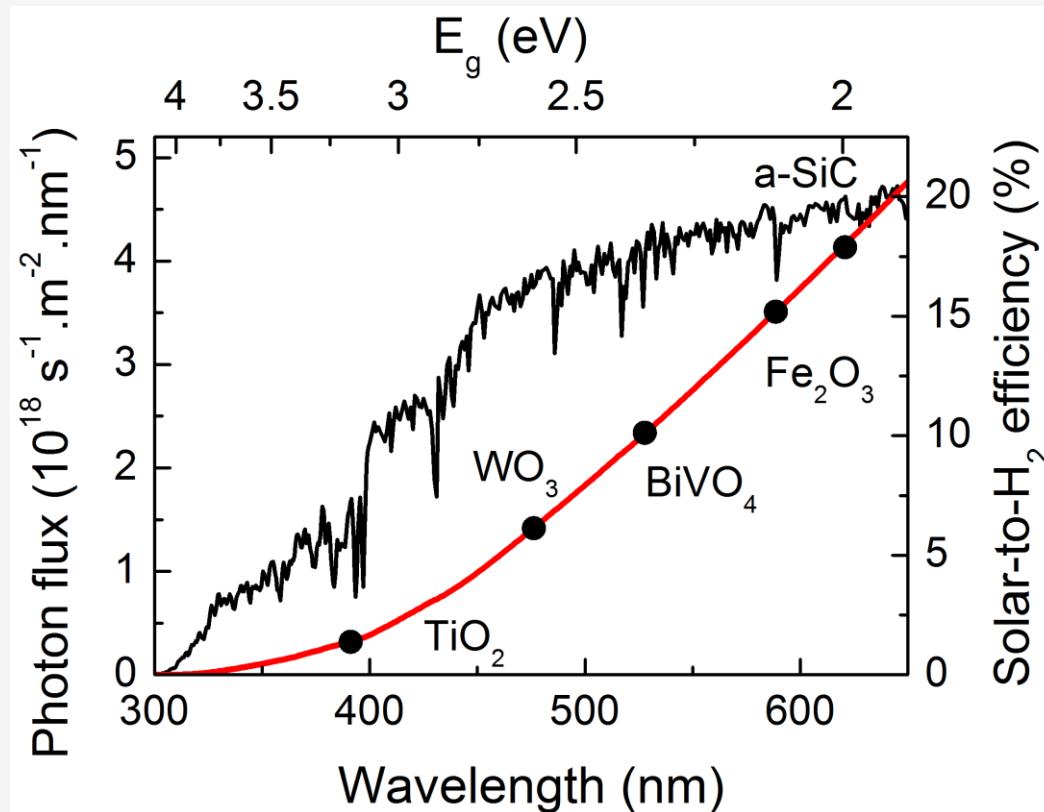

Challenges for photoelectrochemistry

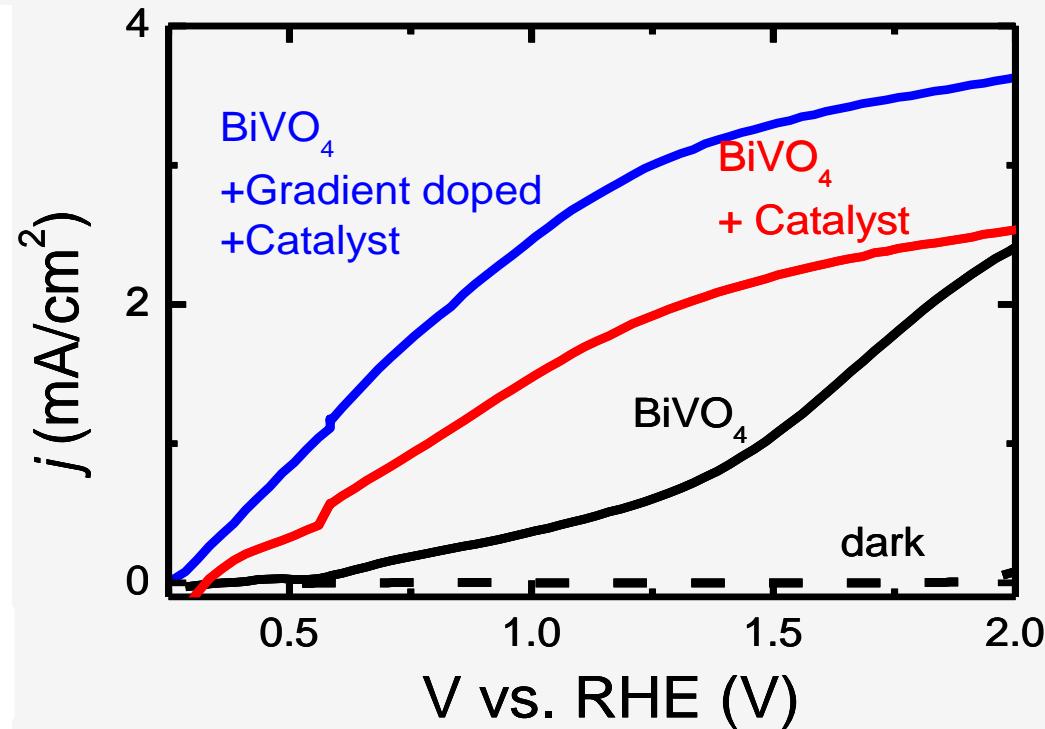

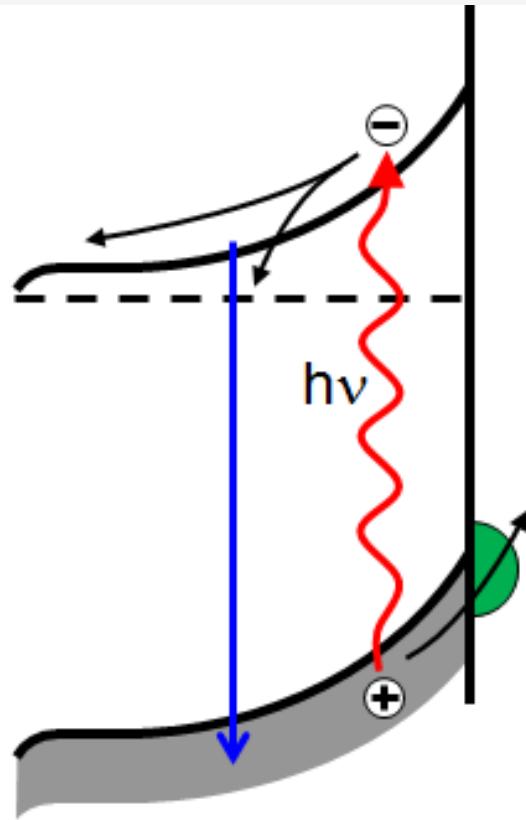

1. Absorption
2. Separation of charges
3. Catalysis

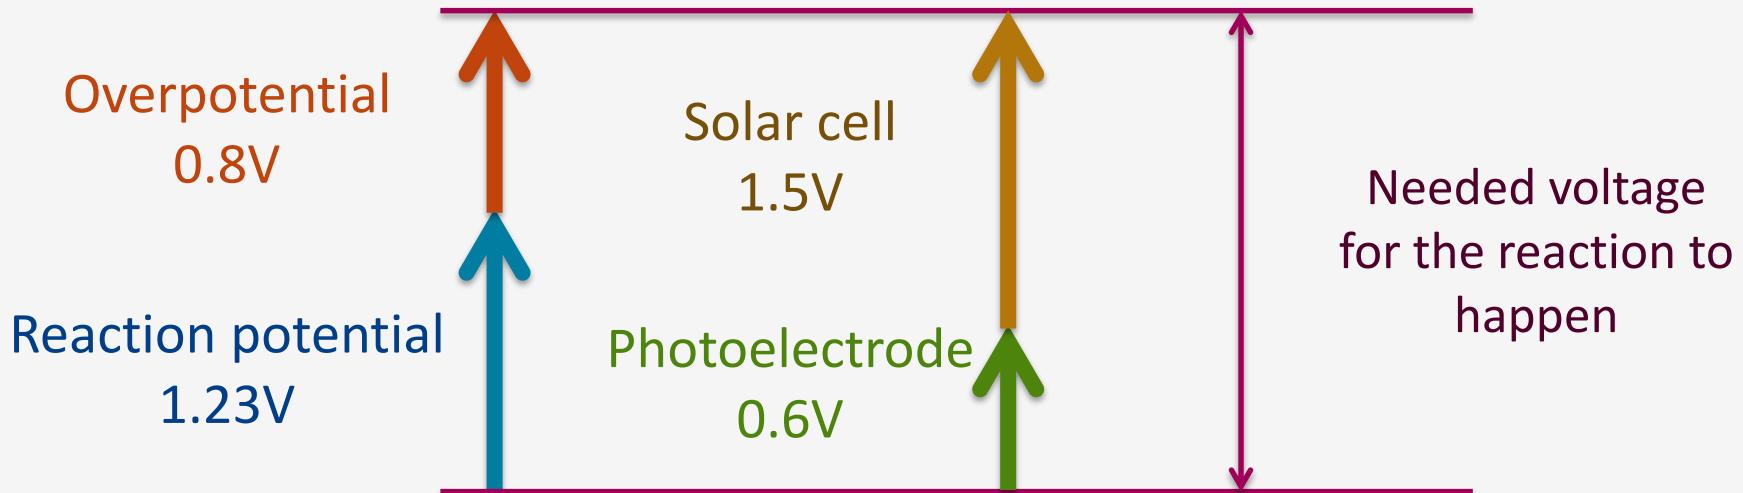

Materials for photoelectrodes

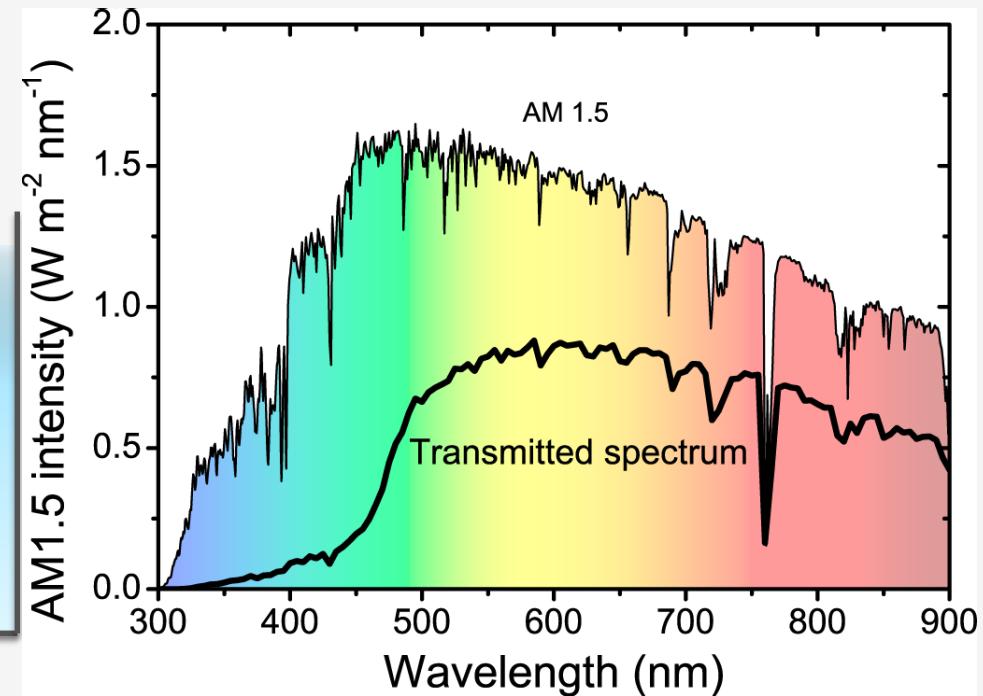

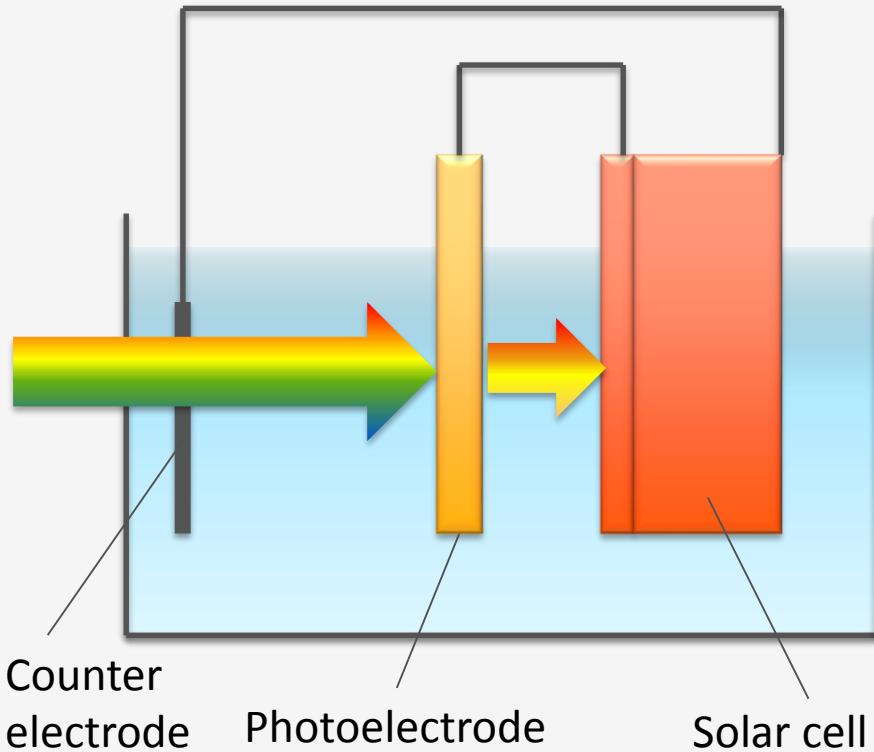

Improving photoelectrode efficiency

Potential of the reaction

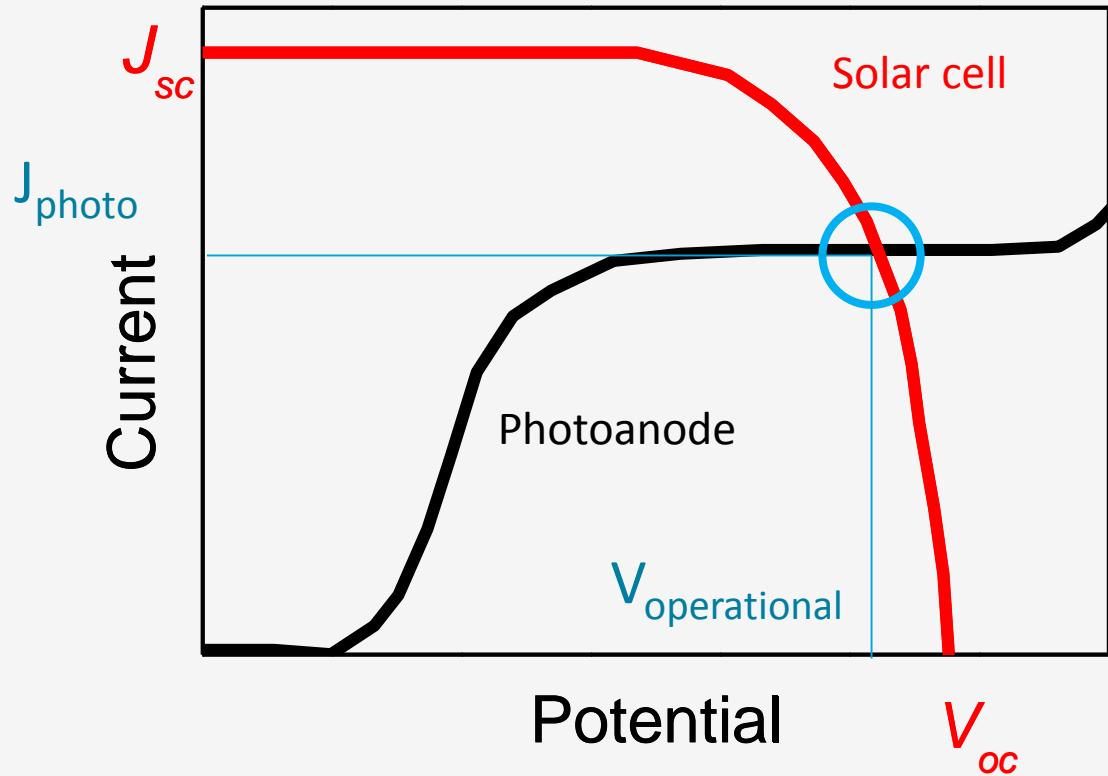

Hybrid photoelectrode

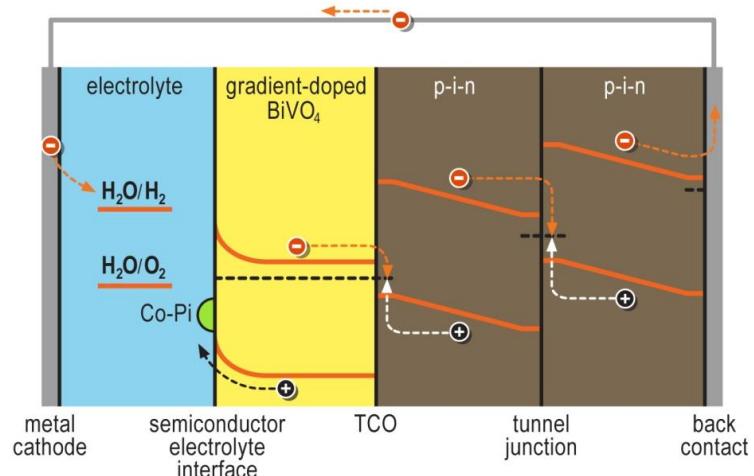

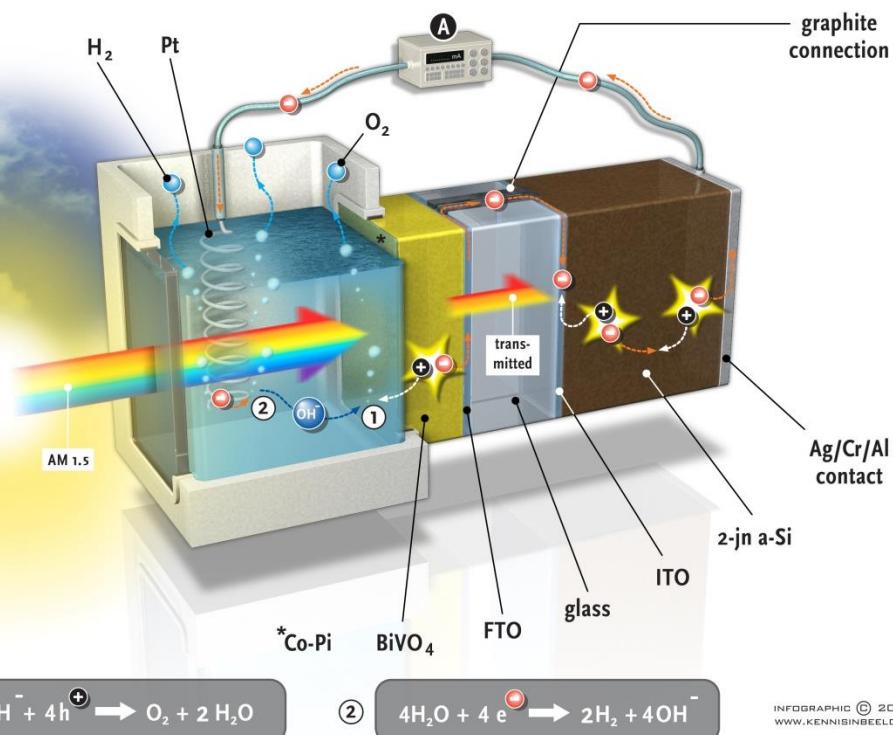

Hybrid photoelectrode

$$\eta_{STH} = \frac{J_{photo} \cdot 1.23V}{P_0}$$

MECS PV-PEC Device

4.9%
Solar to Hydrogen
Conversion Efficiency!

Thank you for your attention!
